IPBRICK.CAFE

—

Digital Workplace

IPBRICK.CAFE is a **private and secure space** that provides tools to **simplify communication** and information exchange, in real time, and **reduce the number of emails** (received and sent).

The application is divided into two major areas:

COMMUNICATIONS	APPLICATIONS

In addition to the feed with publications, IPBRICK.CAFE offers the **"Channels" functionality**, whose objective is to centralize the exchange of information. **Channels** are a part of the application that can be organized by theme, project, team or any other subject that is of interest to the company. The starting point for communication between participants is the **Channel Feed**, where they can share documents and work directly on them, exchange chat messages or have a video conference. The information exchanged / shared within each Channel is always available for consultation by the participants.

It also has a **voting area** (Surveys), a **news area**, allows the management of the **user's account** and profile (follow me, voice mail, files) and elaboration of surveys to measure the opinion of the collaborators on a certain subject.

Ensures access to all work applications through the **Single-sign-on system**.

IPBRICK's Digital Workplace integrates with the Unified Communications solution (IPBRICK.UCoIP) which allows users to communicate by:

Voice   **Video conference**   **Professional Chat**   **Email**

It has a multi-channel presence management system that allows users to see availability in different media.

The ability to **communicate in a centralized way** and to **reinforce collaboration between work teams** becomes essential for companies to remain active in the market, especially at a time when everything is becoming increasingly digital.

Having **easy access to information and work tools** from a single application is half the battle for everyone to be aligned about their tasks and how to perform them, avoiding not solving questions that can be resolved in real time.
